

## React JS program

1. Create a user signup page with Name, Password, Email, Phone number, and Profession (Dropdown) and store the data locally (local storage).
2. Create a login page and use the previously registered credentials to log in. Check if the name and password are matching. If the name and password are matching, then move to the next screen, else show the "Invalid Credentials" message to the user.
3. Upon successful login, open a new page, call the below API and present the below data to the API.

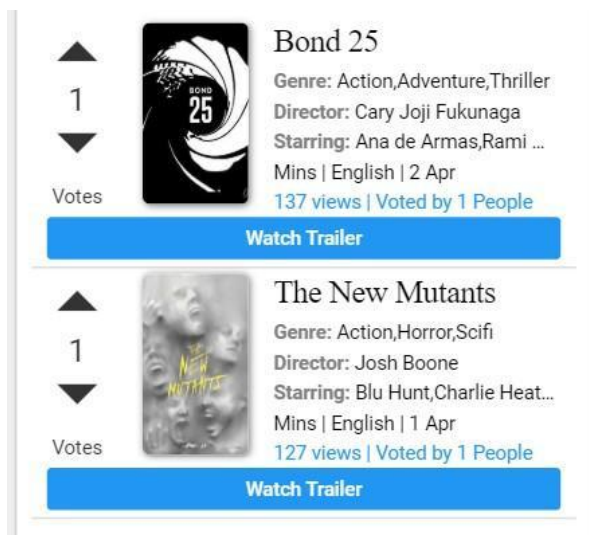

URL: <https://hoblist.com/api/movieList>

Type: POST

Parameter: category: "movies",

language: "kannada", genre: "all",

sort: "voting" Follow this pattern:

4. Add one option in the menu bar, called "Company Info" and show the below details when the user clicks on that option.

**Company:** Geeksynergy Technologies Pvt Ltd

**Address:** Sanjaynagar, Bengaluru-56

**Phone:** XXXXXXXXXX09

**Email:** [XXXXXX@gmail.com](mailto:XXXXXX@gmail.com)
